

Make a Smartphone Stand from a 15oz Plastic Container

Need a stand for your smartphone so you can watch a video or read your favorite blog about reusing trash? Rescue a 15oz or 16oz plastic sour cream, ricotta cheese or yogurt container from your recycling bin and follow these steps:

1. Print this page.
2. Cut out this template

3. Line up the corners of the template with the base of the container and trace it.

4. With strong scissors, cut out the section of the container.
5. Put the container upside-down on a surface and you now have a stand for optimum smartphone viewing.

NOTES: Keep the lid on the container for extra strength. You can put something heavy inside the container (like coins) to keep it in place.
